

Using real data from your operations and converting it into useful information will allow you to make correct decisions for the growth of your business. But do you recognize these issues?

"My ERP has all the data, and I am able to find it with some effort, but it would be easier for me to see KPIs that I need almost daily within the same environment." "We use spreadsheets and manual processes to analyze our data. It is an expensive process in staff time."

«Time is money and I cannot wait that long to see reports with such repetitive operations.»

Our advanced finance analytics solution is the answer, natively integrated with your Dynamics 365 Business Central application, surfacing real data from your day-to-day operations with an additional layer of business intelligence using Microsoft Power BI.

Why is BI for Business Central the right product for you?

Getting a bird's-eye view of your business finances is not easy – with a lot of data to track and many variables to consider. Business Central is optimized for operational day-today work rather than analysis to support decision-making.

Power BI is a powerful tool to surface key data into digestible and meaningful reports. But sometimes, companies think it will take too long or they don't have skills to set up BI reports.

Therefore, we have created an out-of-the-box Power BI pack for you.

BI for Business Central includes a set of dashboards to meet your needs, with various data panels (more than 120 in total) covering different areas:

- Balance sheet
- P&L
- Invoices
- Working capital
- Liquidity
- Profitability
- Margin
- Debt
- Payments

BI for Business Central can be accessed from inside your Business Central application.

No need for additional software or switching applications. Your operational system and your reports, side by side.
