

## project overview accelerator

View and manage key production, finance and delivery information from one project management screen

 Microsoft | Dynamics 365

If you are responsible for management of multiple production and manufacturing projects, you will recognize these issues:

“As a Project Manager, I would like to have an easy overview of invoicing, production and cross-check project delivery milestones.”

“It’s very time consuming and ineffective for us to manage multiple projects and their key areas by navigating multiple screens.”

“We need to proactively manage our projects and production processes. If we could easily identify and forecast issues and delays it would positively affect our schedule.”

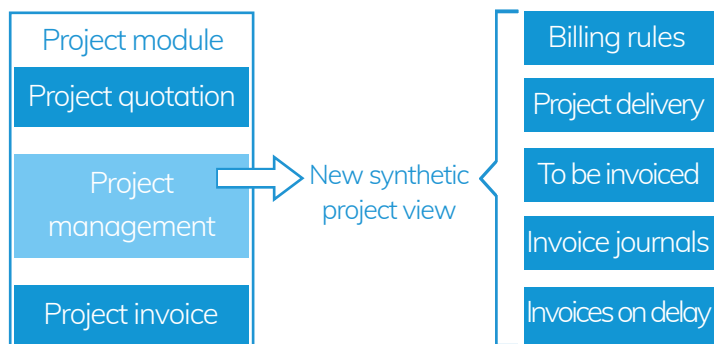

### Why choose Prodware to support your business process needs in Microsoft Dynamics 365 Finance and Operations?

As a Microsoft partner, Prodware has developed and implemented Dynamics projects across Europe.

Our experienced R&D team work closely with our clients to develop additional functionalities that suit their multiple project management needs.

### The Project Overview accelerator for Dynamics 365 Finance and Operations helps by:

- Providing a summary screen of various project progression aspects, project deliveries and tracking
- Providing a summary screen of various project progression aspects, project deliveries and tracking
- Easily aligning financial and production information in one area
- Increasing productivity and save time on manual tasks
- Improving financial health of the project with improved cash flow and proactive management

Speak to Prodware about getting your Microsoft Dynamics system fully compliant with your manufacturing project management needs.
