

Get your Microsoft Dynamics NAV system GDPR compliant

GDPR

NAV
Microsoft Dynamics

If you are responsible for meeting your organisation's GDPR compliance, you will recognise these concerns:

"I'm responsible for our Dynamics NAV system, but I'm not sure of my GDPR obligations"

"We've been approached by so many so-called GDPR experts but no-one has NAV experience!."

"We need an easy to use interface that can handle GDPR."

Why choose Prodware to meet your GDPR obligations in Dynamics NAV?

As a Microsoft partner, Prodware has developed and implemented GDPR compliance projects specifically for Microsoft Dynamics across Europe.

Our clients can opt for an easy to use yet robust add-on for their Dynamics NAV system (NAV GDPR accelerator) or they can take our complete package, which includes the add-on solution plus services and supporting documentation to ensure that you are fully compliant.

Solution

- Accelerator for Dynamics

Documentation

- Compliance guide
- Analysis results

Services

- Dynamics configuration
- Technical analysis
- Process analysis

The NAV GDPR accelerator

- Simplifies compliance with privacy requests from data subjects
- Easy to use interface for NAV operators
- Logs all operations to comply with record-keeping requirements
- Out of the box for NAV v4 to NAV 2013, earlier versions up to v2 available on demand

Rapid and easy installation

An out-of-the box solution delivered for a quick start:

- Specific range
- Preconfigured solution
- User manual

Register and log all GDPR actions

The NAV GDPR accelerator will allow users to track all incoming requests and any action related to subject's personal data.

Anonymization

Search for personal data across the system and enable rectification and exporting of the data.

Integrated Reports

The personal data can be printed to meet the obligations of rights of access and information.

A brief refresher of GDPR

-  Current EU personal data protection regulation
-  Attempts to give back control of personal data to citizens
-  Very strict regarding consent, legal base for processing
-  Expands personal rights; adds new obligations for companies
-  Limits data transfers outside EU and retention time
-  Huge penalties for infractions – much higher than existing ones

How can Prodware's GDPR compliance package assist?

- Access control
- Audit & notification
- Geographical restrictions
- Identify personal data
- Legal basis
- Privacy policy
- Right of access
- Right of rectification
- Right to data portability
- Right to erasure
- Right to limitation of processing
- Security

Legality

- You must make sure you have a **legal basis** for treatment, and perform only treatments supported by that basis.
- More often than not, the legal basis for NAV data will be a **contract** with a customer or provider. It's important to **restrict** processing to the fulfillment of this contract.
- You must make sure your **privacy policy** and other legal texts are adapted to the new law and properly communicated.

Privacy

- You must follow the principle of **data minimization** and use as little personal data as possible in each case.
- You must establish a channel for subjects to perform **privacy requests** and **execute those requests** in a timely manner.

Security

- You must **protect** personal data with adequate security measures.
- You must respect **restrictions regarding the geographical transfer** of data

Speak to Prodware about getting your NAV system compliant with GDPR in three easy steps with the add-on solution, documentation and services.
