supply chain scan & go accelerator

Achieve productivity and accuracy improvements throughout your business and warehouse processes

Microsoft | Dynamics 365

If you are responsible for the operational aspects of the flow between the warehouse and the rest of your business, you will recognise these challenges :

"We need to improve the information flow between warehouse, procurement and finance."

"We need the warehouse operators to quickly scan inventory in order to send back information to the back-office."

"Quality management throughout the production and goods-in processes needs to be quick and easy."

Why choose Prodware to support your production cycle needs in Dynamics 365 for Finance & Operations?
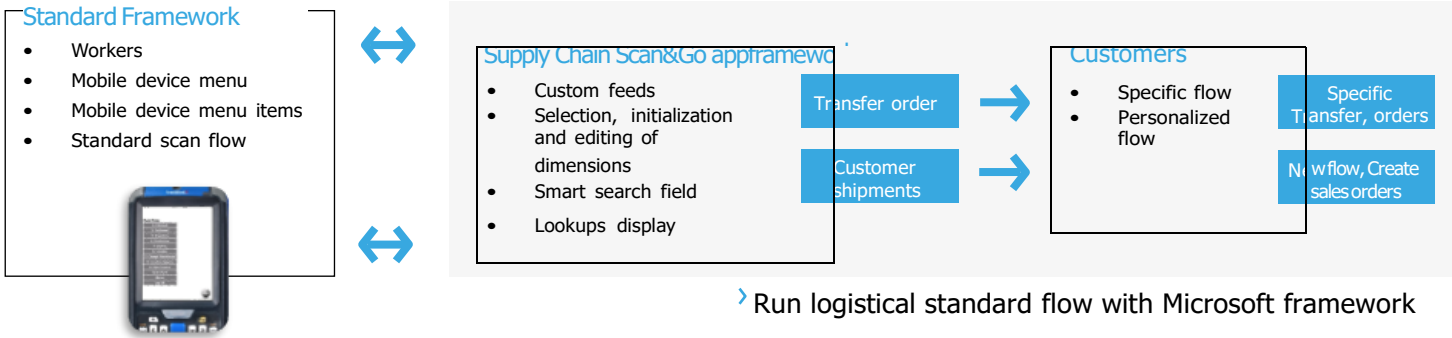

As a Microsoft partner, Prodware has developed and implemented Dynamics 365 and AX projects across Europe.

Our experienced R&D team work closely with our clients to develop additional functionalities that suit their stock management needs.

Supply Chain Scan & Go accelerator runs Dynamics 365 standard logistics feeds with the same technology. It includes processes such as:

- Customer shipments
- Receiving suppliers
- Stock transfers
- Preparation
- Delivery of products on production order
- Quality management throughout production and warehouse operations
