

Turn unstructured data into structured and enriched outputs for better quality, efficiency and productivity.

Challenges

We have multiple documents held across different repositories which our team need to search and review. As this is unstructured information it's time consuming to both update and search for the right information.

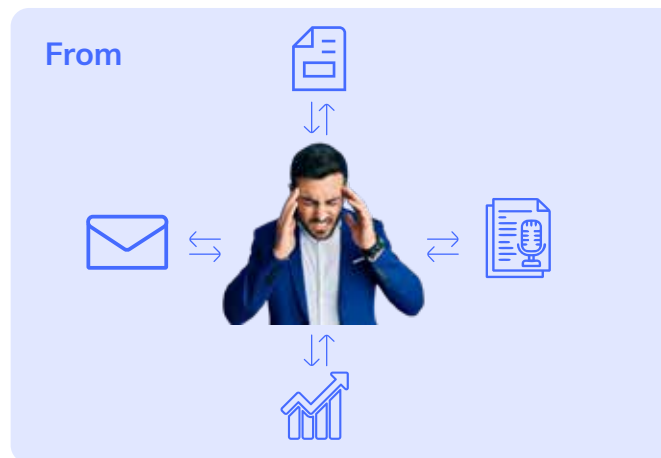

We are upgrading our legacy ERP and CRM systems and finding difficulties during data migration. The fields in our new systems require richer data with more information that is held elsewhere. We need to cleanse, enrich and structure all data at speed.

What is Generative AI?

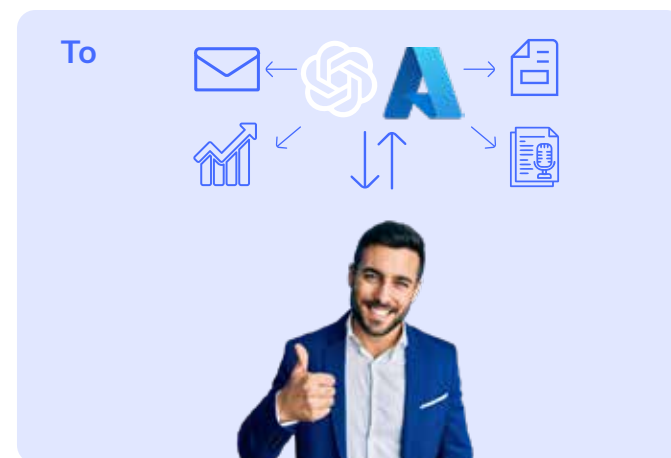

Today's Generative AI can create human-like responses including text outputs, images, music and even computer code. Generative AI models are trained on a set of data and learn the underlying patterns to generate new data that mirrors the training set.

The Generative AI revolution | Talk with data

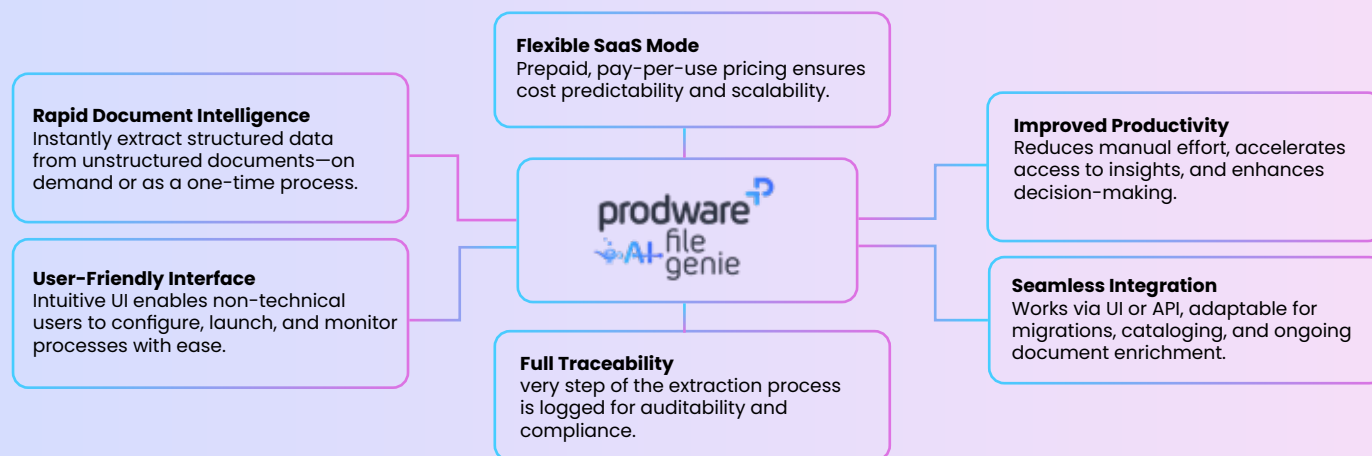

What is AI File Genie?

AI File Genie is a SaaS document intelligence tool that rapidly extracts and enriches data from unstructured documents, on demand or as a one-time process, improving data quality, insights and user adoption. It's flexible, fast and ideal for data transformation projects.

Benefits of AI File Genie

05

How can you use AI File Genie?

Here are just some examples of how AI File Genie supports you with on-demand or recurrent needs.

Education – Educational content management

Extracting key data from textbooks, academic articles and course materials to facilitate content organization and searchability for every new yearly course.

Financial – Regulatory Compliance

Identifying relevant information in regulatory documents to ensure compliance with financial regulations for periodic audits.

Healthcare – Medical records management

Extracting key data from electronic medical records to improve patient management and clinical decision-making once a year.

Real Estate – Property management

Extracting information from property documents, lease agreements and real estate appraisals to facilitate property management updates every three months.

Human Resources – Labor documentation management

Identifying and organizing labor documents such as contracts, performance evaluations and company policies.

Marketing and Advertising – Content management

Organizing and cataloging marketing materials once a year, such as advertisements, press releases and market studies.

Legal – Contract management

Automating the extraction of key terms, expiration dates and important clauses from legal contracts.

And many more sectors: Retail, Logistics, Energy, Food etc.

Ask for a conversation today to connect with our AI experts to support you in extracting, structuring and enriching your business data to gain its true value.

06

Start to transform your information

It's easy to configure and launch your processes, with versions, projects and jobs.

Create Metadata Projects

Each project is a collection of versions

Create Version

Each project allows you to configure what and how it has to be extracted from your documents

Launch Job

A job can be asynchronous or synchronous.

Get Data

Extract a file with the data.
