Manage internal and external data exchange with an easy to use interface

If you are responsible for data management and imports in your business, you may recognize these challenges:

“We use multiple external systems, processes and suppliers to run our operations, this can slow the supply chain down.”

“We use multiple suppliers and they use their own systems that differ from what we use (Microsoft Dynamics). It makes the exchange of data, difficult and time consuming.”

“Standard Data Management isn't sufficient and too complex. We want to be able to construct new data entities easily in a simple interface; with templates out-of-the-box.”

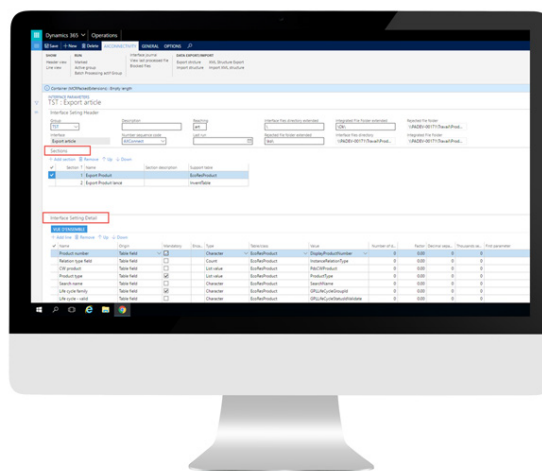

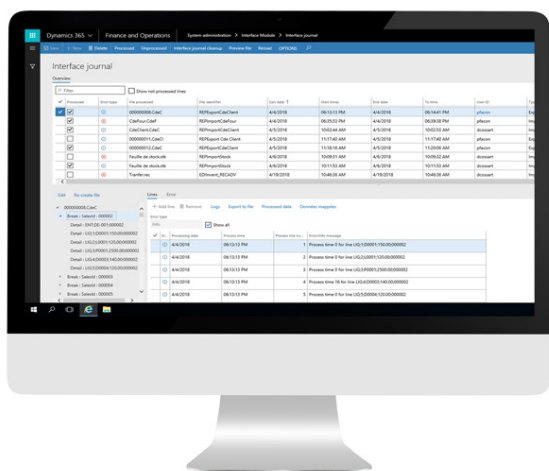

Why choose Prodware to support your data management needs in Microsoft Dynamics 365 Finance and Supply Chain Management?

As a Microsoft partner, Prodware has developed and implemented Dynamics 365 and AX projects across Europe.

Our experienced R&D team work closely with our clients to develop additional functionalities that suit their data management needs across the supply chain.

The Connectivity accelerator helps by:

- Providing multiple connectivity touch points in an open and easy to manage app
- Connects with best-of-breed systems, so no compromise
- An interface journal keeps track of events
- Simplified batch management

Speak to Prodware about getting your Dynamics 365 system fully aligned with your own data management needs.
