

project inventory tracking accelerator

Better track multi-level projects and manage project processes within your Dynamics 365 system

If you are dealing with multiple multi-level production projects, you will recognize these issues:

“If we have multiple critical released products and their production process (with multiple levels) involves inheriting that Critical status on component or sub-component, it causes a lot of issues when drawing down for project consumption.”

“While managing multiple projects, using the standard project module, it can be complex to ensure that the goods are reserved for our project.”

“As a project manager, I need to track my projects and monitor the impact of consumption on stock, procurement and logistics.”

Why choose Prodware to support your project organization needs in Microsoft Dynamics 365 Finance and Operations?

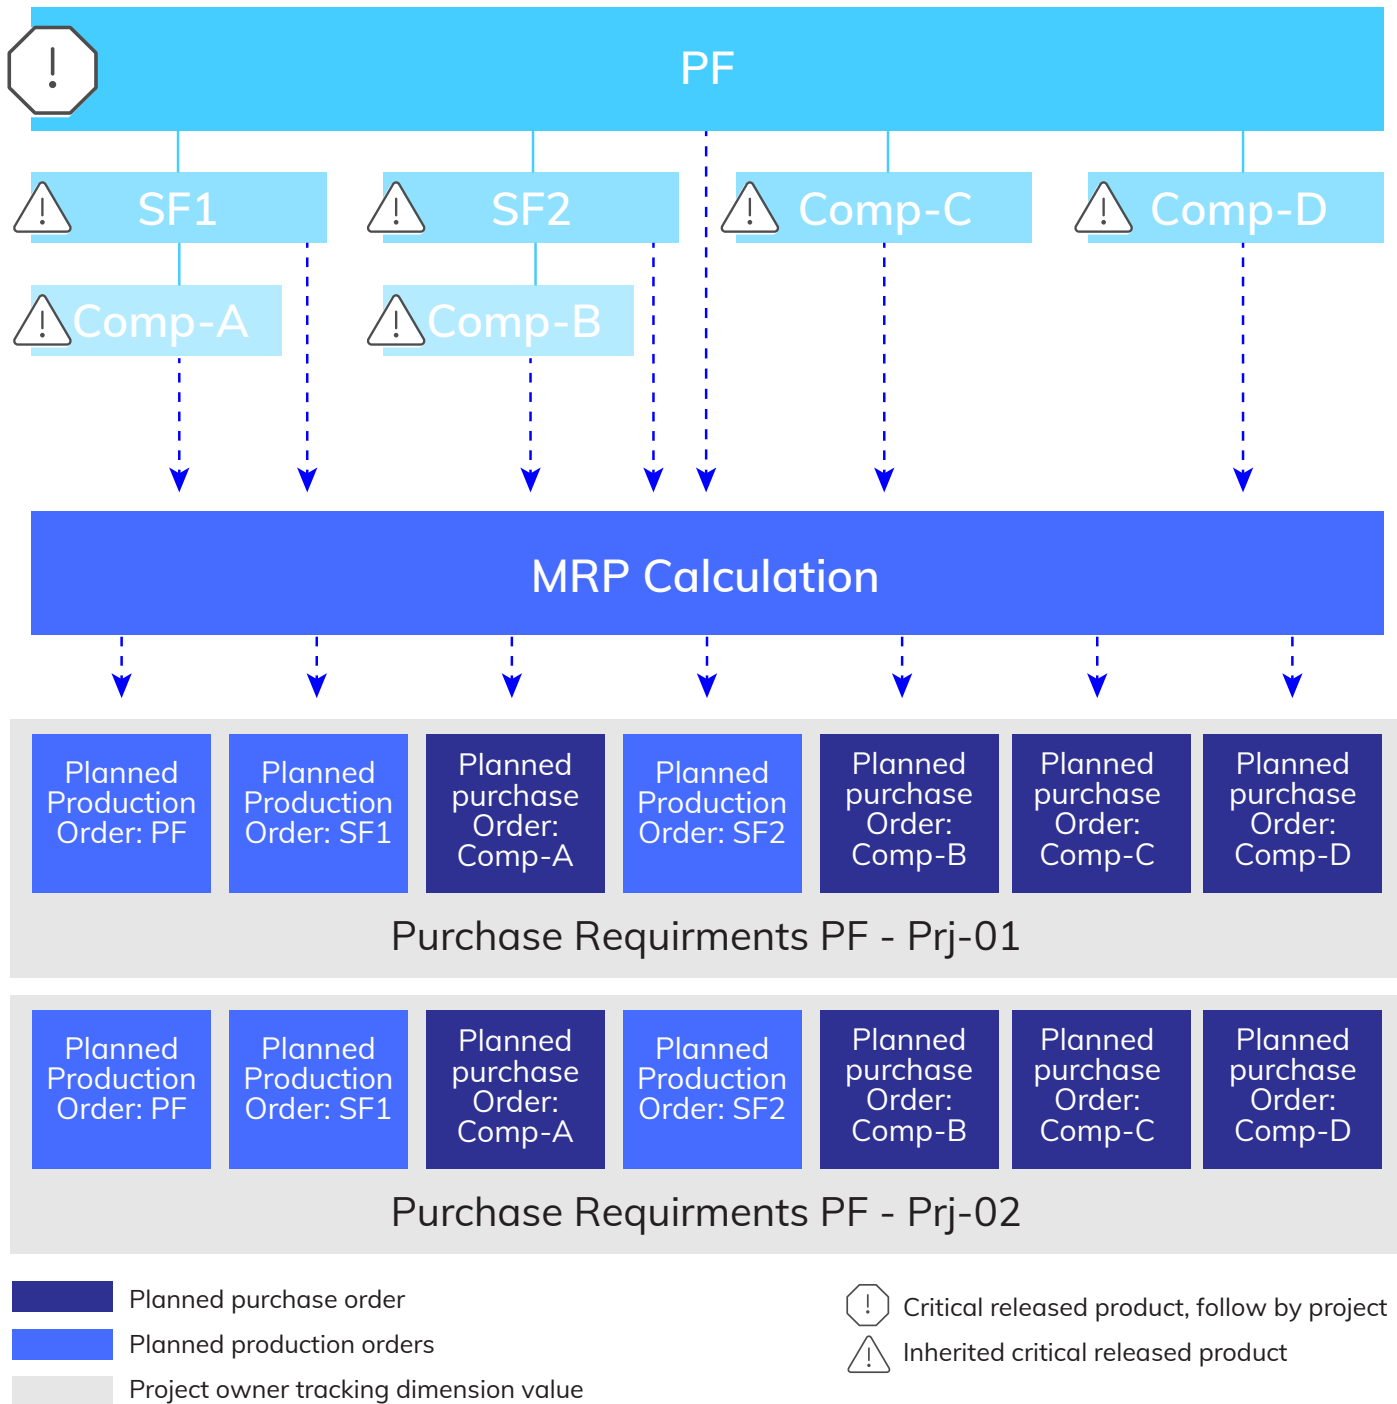

As a Microsoft partner, Prodware has developed and implemented Dynamics 365 projects across Europe.

Our experienced R&D team work closely with our clients to develop additional functionalities that suit their own project management needs.

 The Project Inventory Tracking accelerator helps ensure that goods are reserved for the production project without complexity; by tracking projects and monitoring the impact on logistics, specific products to be purchased, related stock movements, and forecast orders, plus providing Project Managers with an analysis via a Power BI dashboard:

- Identify purchase goods specific for the projects
- MRP standard system calculation by project
- Link projects to already created critical products
- Inherit BOM values from released products
- Track and change critical, non-critical article statuses
- Out-of-the-box for Microsoft Dynamics 365 Finance and Operations

Speak to Prodware about deepening the integration between your production and project processes to ensure the smooth running of multi-level projects and products required, within your Microsoft Dynamics system.
