

## serial number management accelerator

Improve detailed traceability on products and their components at multiple levels within your production processes

If you are responsible for your manufacturing production processes, you will recognize these daily work challenges:

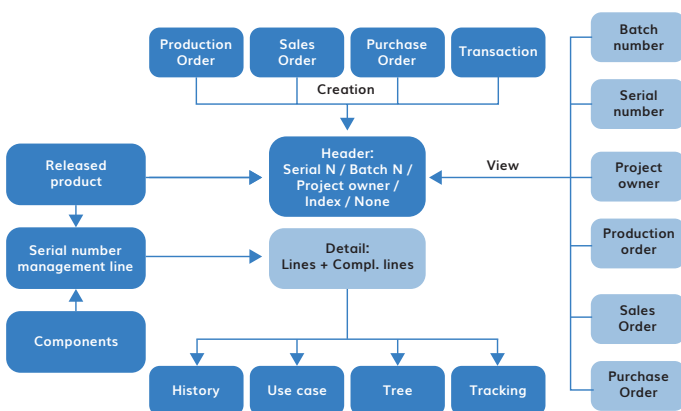

"As a manufacturing company, our production process manages components with batch numbers, serial numbers and by project. We need to easily track each of these aspects in relation to the finished product."

"We'd like to create and see the serial number at critical stages of production, for example production, purchase and sales orders, plus on the project and inventory screens."

The **Serial Number Management accelerator** for **Microsoft Dynamics 365 Finance and Supply Chain Management** improves end-to-end traceability of your products and their components.

The **Serial Number Management accelerator** follows critical components in the supply chain, from the part supplier through to the customer installation:

- The serial number statement provides traceability without implementing the standard management of lot numbers and serial numbers in Dynamics 365
- The management and the setting of the serial number statement is similar to BOM management. This statement allows the user, on finished or semi-finished products, to define the list of the components to be traced
- In a statement, the items defined as critical can be a total or partial selection of the BOM used in production. But they can mixed at upper or lowest component levels
- The user can assign a serial number statement to the manufacturing order. The serial number can then be viewed on production, purchase and sales orders, plus on project and inventory screens

**Why choose Prodware to support your manufacturing operations with Dynamics 365 Finance and Supply Chain Management?**

As a Microsoft Gold partner, Prodware has developed and implemented many Dynamics 365 Finance and Operations and AX projects across Europe.

Our experienced R&D team work closely with our manufacturing, distribution and retail clients to develop additional functionalities that suit their needs to boost best practice, productivity and agility.

Head Office: 45, quai de la Seine - 75019 Paris
