

Next generation AI to power up your business

01 Challenges

I want to generate targeted content for marketing campaigns

I want to allow our employees to easily access HR resources across the hire to retire lifecycle

Our Customer Service teams have a lack of productivity and low support case resolution. They need to find information quicker.

02 What is Generative AI?

Today's Generative AI can create human-like responses including text outputs, images, music and even computer code. Generative AI models are trained on a set of data and learn the underlying patterns to generate new data that mirrors the training set.

The Generative AI revolution | Talk with data

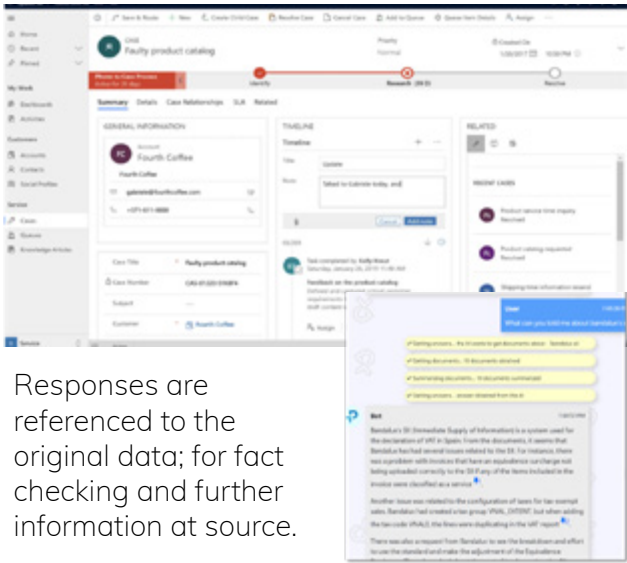

03 What is AI Context Hub?"

Prodware AI Context Hub is an ensemble of different AI technologies that allows us to create a Large Language model (LLM) Chat that draws on multiple resources and documents, both within and outside your business without training.

04 Full cross referencing

Responses are referenced to the original data; for fact checking and further information at source.

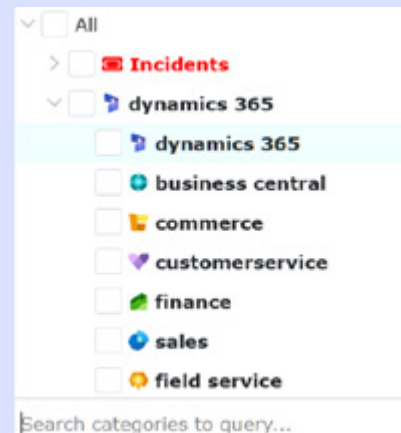

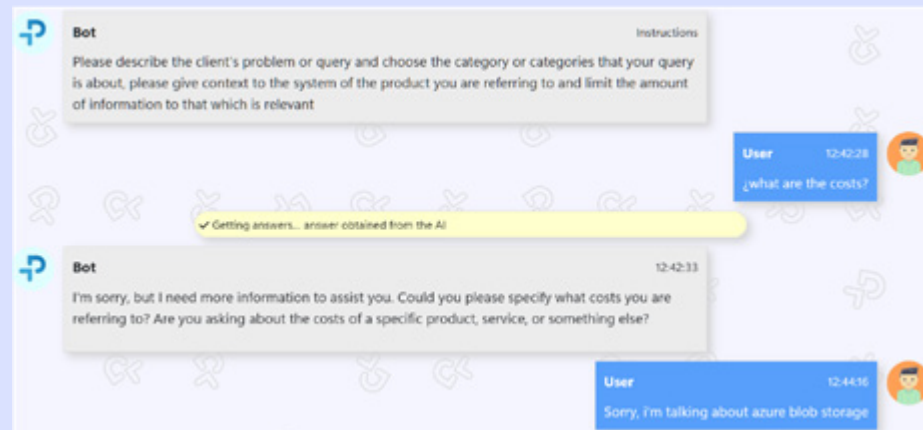

05 Cross-language capabilities

Queries, Prompts, Responses and Summaries are fully language agnostic. For example, AI Context Hub can read a Spanish article, a German email and a French research paper to answer an English question and the response is translated for the user.

06 Context aware conversations: user & AI interaction

AI Context Hub not only remembers the context and responds in answer to further refinements / queries but also is able to ask the user about missing points of data or ask for help refining topics.

Fully flexible, AI Context Hub can be used in multiple industries, connecting to various business applications and data sources. Ask for a demonstration today of how AI Context Hub can empower your employees, boost productivity and improve customer experiences.
